Projects

Clients Management System

[Repository](#) / [Live](#)

The main goal of this project is to facilitate the process of storing clients' data (in future orders and warehouse data) and provide the user with statistics in the form of numbers and charts. The project was built using various technologies, including React.js, TypeScript, Tailwind CSS, and Zustand. The backend of the application is based on Node.js with Express.js and a database in PostgreSQL. In addition, technologies such as JWT and Bcrypt were used to implement an authorization system.

EXotica Crypto

[Repository](#) / [Live](#)

API-based website showing cryptocurrency exchange rates, charts, and market capitalization of cryptocurrencies. Build with technologies like React.js, Firebase, Tailwindcss, and Daisyui

Experience

Junior AML Analyst at Citibank

Dec 2022 - present | Olsztyn

- Assist with the investigations and research on potentially suspicious clients using various internal and external systems and databases.
- Document and report the review/investigation findings and prepare case files with the required supporting documentation
- Work with AML team to summarize, in writing, clear and concise findings of the investigation
- Assist AML team with managing risks by analyzing the root cause of issues and impact to business
